

Internet Speed Test Report

Reporting Period: 22nd – 27th June 2026

Objective

To assess the performance and stability of the internet connection over a six-day period by monitoring download speed, upload speed, and network latency (ping).

Test Results

Test	Date	Download Speed (Mbps)	Upload Speed (Mbps)	Ping (ms)
Test 1	22nd June 2026	19.22	13.74	2
Test 2	23rd June 2026	22.20	15.89	2
Test 3	24th June 2026	21.76	18.17	11
Test 4	25th June 2026	21.80	15.92	2
Test 5	26th June 2026	22.66	16.16	2
Test 6	27th June 2026	21.71	17.99	2

Performance Analysis

Download speeds remained stable throughout the testing period, ranging from 19.22 Mbps to 22.66 Mbps, with an average of approximately 21.56 Mbps.

Upload speeds ranged from 13.74 Mbps to 18.17 Mbps, with an average of approximately 16.31 Mbps.

Network latency (Ping) remained consistently low at 2 ms for five of the six tests, with a single reading of 11 ms recorded on 24th June 2026. This is still within acceptable limits for normal internet operations.

Conclusion

The internet connection demonstrated stable and reliable performance throughout the monitoring period from 22nd to 27th June 2026. Download and upload speeds were consistent with only minor variations, while network latency remained low, indicating a responsive and healthy connection.
